SAFER INTERNET

As the internet and digital technology become a bigger part of our lives, more of our data becomes publicly accessible, leading to questions about privacy. So, how do we interact with the growing digital world without **compromising** the security of our information and our right to privacy?

Imagine that you want to learn a new language. You search 'Is German a difficult language?' on your phone. You click on a link and read an article with advice for learning German. There's a search function to find German courses, so you enter your city name. It asks you to activate location services to find courses near you. You click 'accept'. You then message a German friend to ask for her advice. When you look her up on social media, an advertisement for a book and an app called *German for Beginners* instantly **pops up**. Later the same day, while you're sending an email, you see an advert offering you a discount at a local language school. How did they know? The simple answer is online data. At all stages of your search, your **devices**, websites and applications were collecting data on your preferences and tracking your behaviour online. 'They' have been following you.

So, can we do anything to protect our data? Or should we just accept that in fact nothing is 'free' and **sharing** our data is the price we have to pay for using many online services? As people are increasingly aware of and worried about data protection, governments and organisations are taking a more active role in protecting privacy. For example, the European Union passed the General Data Protection Law, which regulates how personal information is collected online. However, there is still much work to be done.
